Reference: Windsor Electric Company

Subject: ABC Excellence in Construction – Letter of Support

To Whom it May Concern:

Please let this letter stand to support the work completed by Windsor Electric Company at the Hughes at PIC MC project in Germantown, Maryland. Windsor's collaborative efforts with Whiting-Turner, the design team, and ownership group proved critical to the project's successful delivery. This collaboration entailed coordinating the move of an existing manufacturing facility in Gaithersburg to a new facility in Germantown; including providing all necessary electrical points of connection for new and relocated equipment. All work was completed on time within the confines of a tight schedule.

Windsor's entire team was thoroughly communicative throughout the life cycle of the project, which was essential to its success. As one of our most critical trade partners, they rose to the occasion of successfully integrating new infrastructure and existing equipment to minimize the client's down time in production while moving their facility.

Additionally, while the current supply chain market presented material procurement challenges, Windsor effectively communicated with all parties and brought live feedback and innovative solutions to the table to mitigate those challenges. This allowed for the project team to make joint decisions in real time as roadblocks were encountered. All of which was presented and implemented in a highly professional manner.

It bares mentioning also that the craftsmanship of Windsor's employees was exemplary. The importance of both worker safety and work quality was paramount to both their field and executive staff and the final product speaks directly to this.

It is my opinion that the work performed by Windsor Electric on the Hughes at PIC MC project warrants strong consideration for the ABC Excellence in Construction award.

Please do not hesitate to contact me with any questions or concerns.

Sincerely,

Charlie Raffensberger
Project Manager
